

Malaria's deaths in Africa

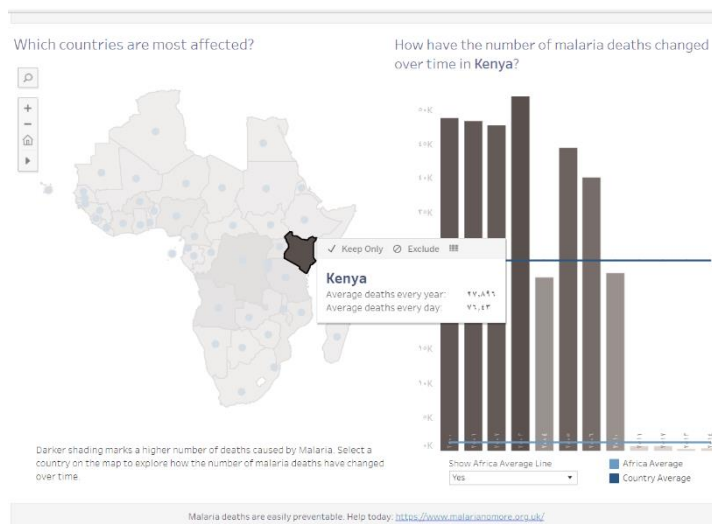

Malaria deaths in Mali from 2000 to 2014

Deaths during the year: 1601

Deaths during the day: 439

From that dashboard, I clicked on Mali on the map, this showed deaths due to malaria for each year from 2000 to 2014. It was found that there was an increase in the annual deaths due to malaria by more than half by the year 2007, about 1500-3000 deaths per year. In 2000-2006 it was recorded 500-1500 deaths per year.

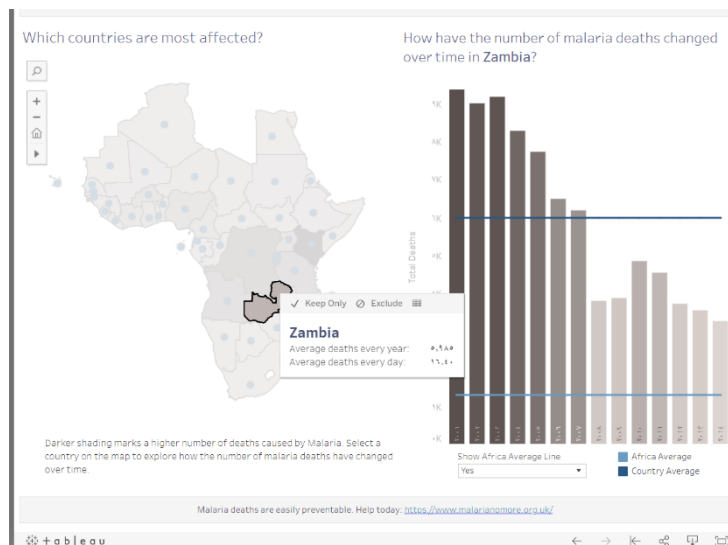

Malaria deaths in Kenya from 2000 to 2014

Deaths during the year: 27,896

Deaths during the day: 7,643

From that dashboard, I clicked on Kenya on the map, this showed deaths due to malaria for each year from 2000 to 2014. It was found that there was a decrease in deaths due to malaria in 2011 to below 1000. Before 2011 there were about 25,000-50,000 deaths per year.

Malaria deaths in Zambia from 2000 to 2014

Deaths during the year: 5985

Deaths during the day: 1640

From that dashboard, I clicked on Zambia on the map, this showed deaths due to malaria for each year from 2000 to 2014. It was found that there is a decrease in the death rate at the end of 2012 by about 1000-4000 deaths per year than the starting of 2012 with about 5000-9000 deaths per year.

According to the reports of the World Health Organization and based on what is stated in the records of the national programs to combat malaria, the reason for the decrease in deaths in Kenya and Zambia and the increase in Mali is due to:

1- Kenya and Zambia were among the six countries that were covered in 2006 by 50% of the mosquito nets impregnated with insecticides, so that the recorded number of deaths and cases halved in regions with high coverage rates in the distribution of mosquito nets and the provision of treatments was the goal of the 2010 World Health Assembly.

2- The link between the high levels of aid and external funds and the recorded decrease in death rates, as much of the foreign aid is concentrated in small countries with low disease burdens.
